Booting and Using the System

There are just 3 steps to using the Table Selfies'.

Step 1 - Plug in the Router and turn it on. Note: The Router can take 4 minutes to fully boot up.

Step 2 - Plug in the TableSelfie Server.

Step 3 - Plug in Battery Packs to TableSelfie's and Turn them on in set's of 2, after boot up check they have updated by doing a run through of each of them then move onto the next 2. On first boot the screen may show some odd graphics or text, this is normal and will be removed after a run through.

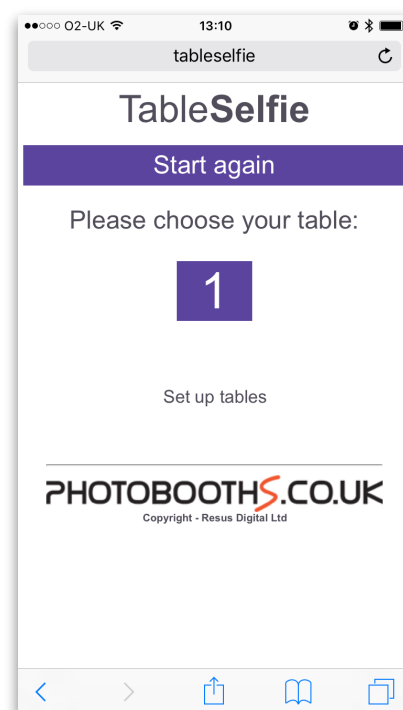

Note: It's important to do them in 2's then move on as the TableSelfie's will communicate with the Server and update any backgrounds, Logo's or settings that have been set on the server.

Connecting to the TableSelfie WiFi

Depending on the network setup you have (Internet or Stand Alone) on your TableSelfie you firstly connect to the Wifi network on your mobile (or tablet) device connect to the WiFi called TableSelfie. After connection to bring up the TableSelfie Page (shown Right) type into the address bar <http://192.168.1.202/> to access the TableSelfie web admin.

From the initial TableSelfie Control page pictured right you'll see a list of Tables connected and the option to Set up Tables.

Access to this page is the same on any device after connecting to the WiFi and entering into the browser <http://192.168.1.202/>

TableSelfie Printer Setup

If your TableSelfie was supplied with a Printer you shouldn't need to setup anything as it will already be pre-setup from the Factory.

However the following is useful should you want to use a different printer, or you are supplying your own printer (Note: only CP70DW printers can be used).

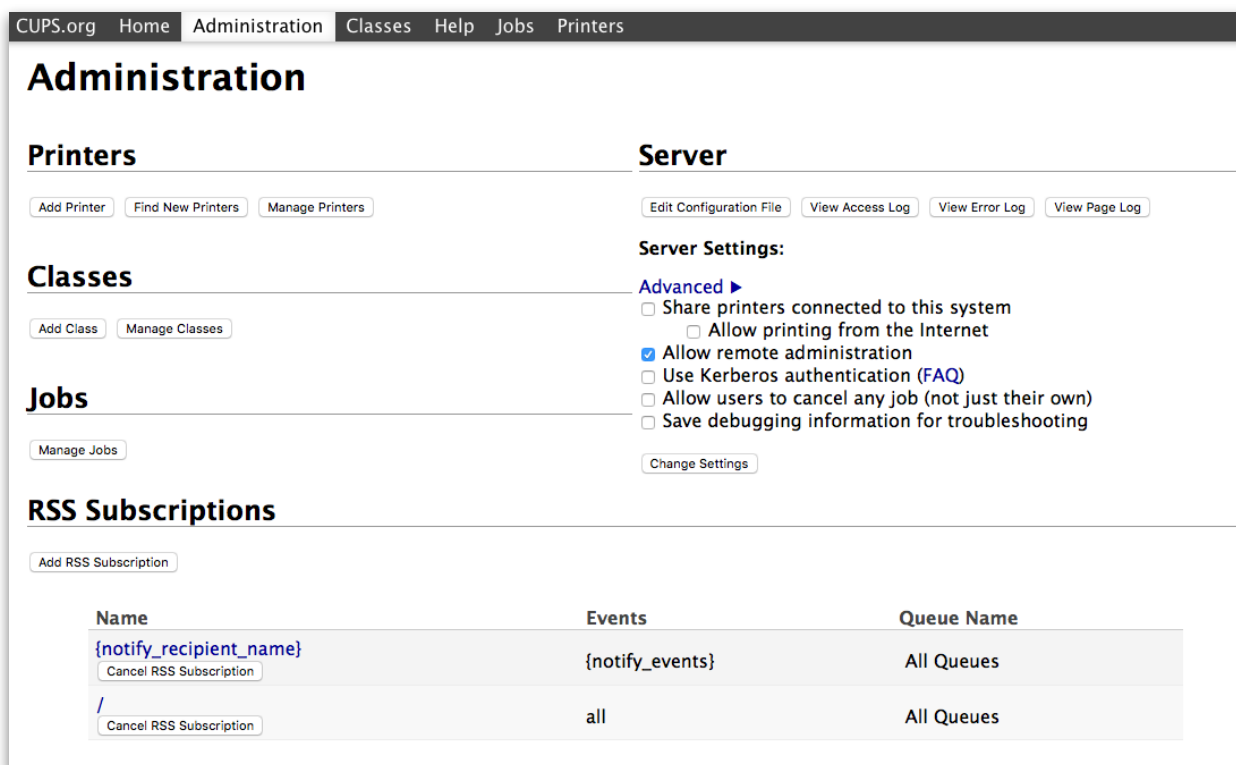

Power on and connect the Printer to the Server with a USB cable.
Then whilst connected to the TableSelfie Wifi network and with the server switched on type into a browser the following:

192.168.1.202:631

You will be presented with the following:

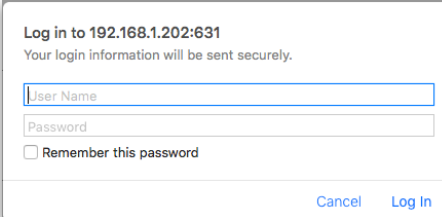

Next Click on the Administration Option in the top Menu.

Name	Events	Queue Name
{notify_recipient_name} Cancel RSS Subscription	{notify_events}	All Queues
/	all	All Queues

Click Add Printer, it may show a 'Upgrade Required' and a new web address, wait a couple of seconds and it will redirect you automatically, then click 'Add Printer' again.

At the Login Prompt type in server as the username and letmein123 as the password.

A login prompt window titled "Log in to 192.168.1.202:631". It contains a message "Your login information will be sent securely." and two input fields: "User Name" and "Password". There is a checkbox labeled "Remember this password" and two buttons at the bottom: "Cancel" and "Log In".

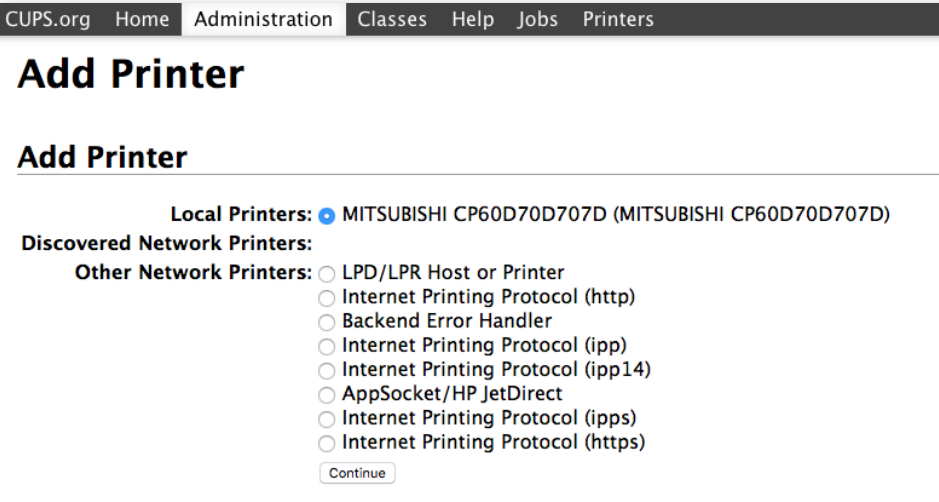

Log in to 192.168.1.202:631
Your login information will be sent securely.

Or Provide a PPD File: no file selected

Next you just need to make sure the settings are correct for the printer as below.

Set Printer Options

Set Default Options for MITSUBISHI_CP60D70D707D

General Extra 4	Printer Features Banners	Common Policies	Output Control Common	Output Control Extra 2	Output Control
---------------------------	------------------------------------	---------------------------	---------------------------------	----------------------------------	-----------------------

General

Media Size: 4x6

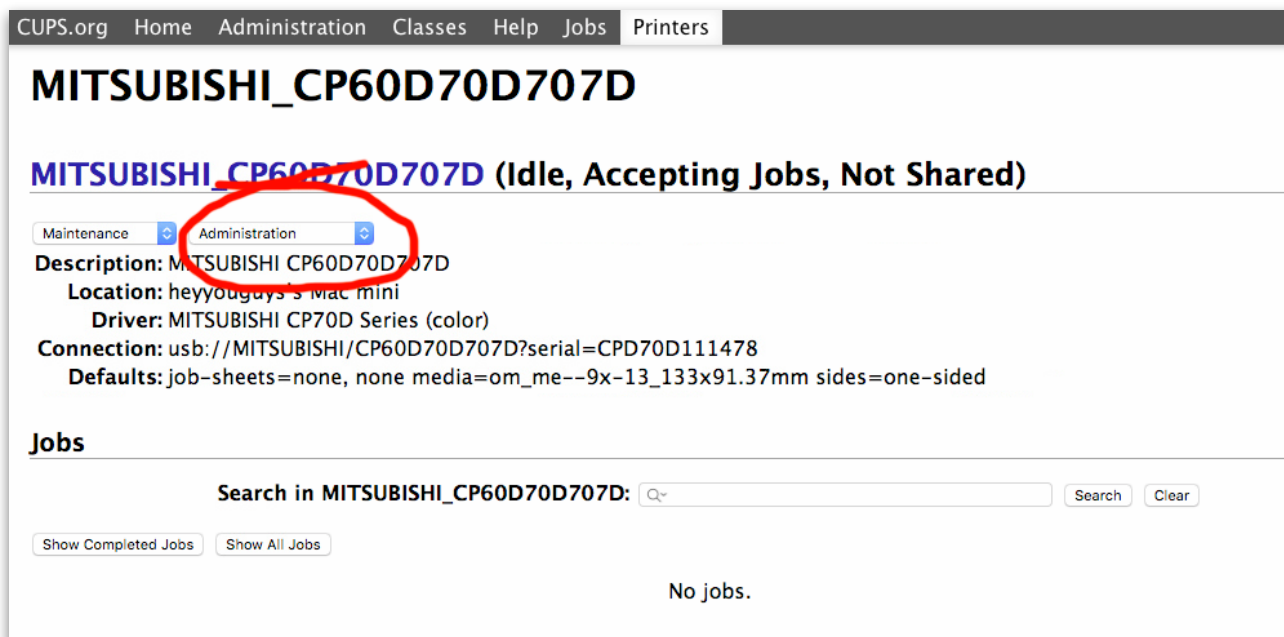

Color Model: RGB Color

Color Precision: Normal

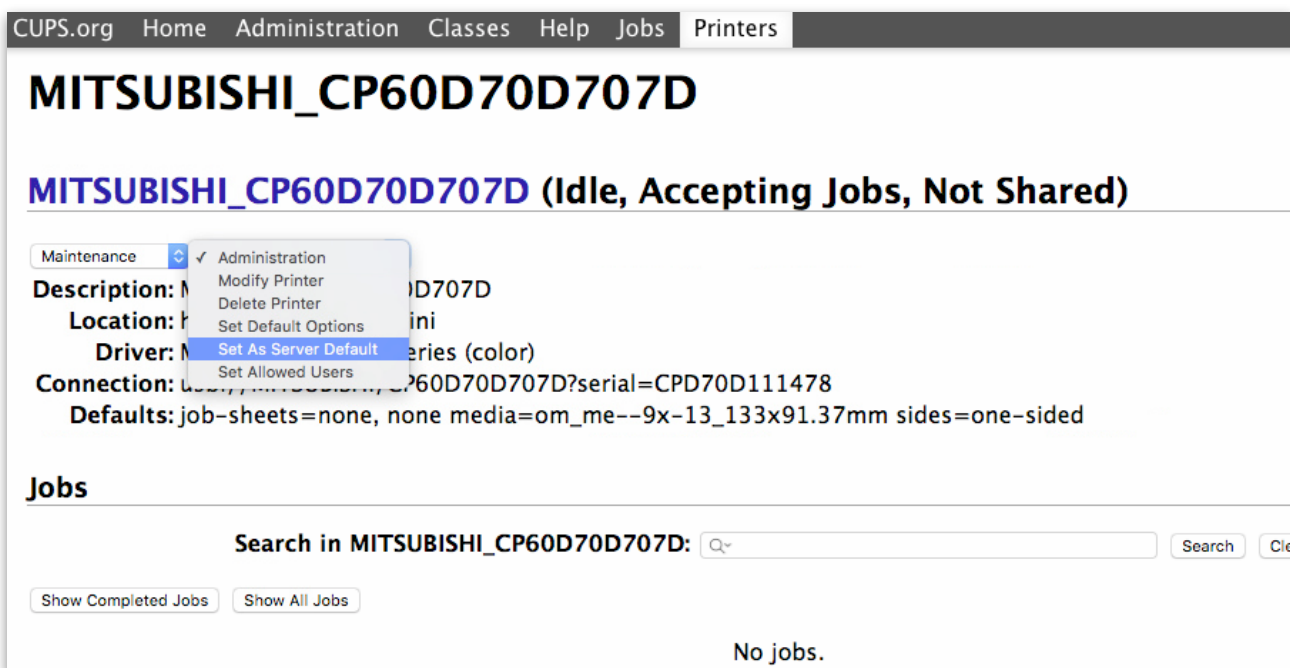

Shrink Page If Necessary to Fit Borders: Shrink (print the whole page)

Click Set Default Options then wait a few seconds for the page to update. Your now all set with your printer.

The last thing to do is to Set the Printer as the Default Print so select the Printers main Menu and Click on Your Listed Printer. Next Select the Administration Drop down menu (shown highlighted).

Then Click on the Set As Server Default. If it asks at any point for a Username and password enter
server (all lowercase)
and
letmein123 (all lowercase).
It will then refresh the page and your all setup with your printer.

Router Setup - No Internet

If you don't need uploads then setting up the Asus Router is relatively easy.

Note: This is how the Routers come initially setup.

Firstly turn on the Router and the Server making sure the Router has an ethernet adaptor connected to one of it's ports and also the Router Ethernet Port.

Next connect to the Router Wifi with your desired device (Preferably TalbleSelfie5G).

Once connected type into a browser the following:

<http://rt-ac88u-XXXX.local>

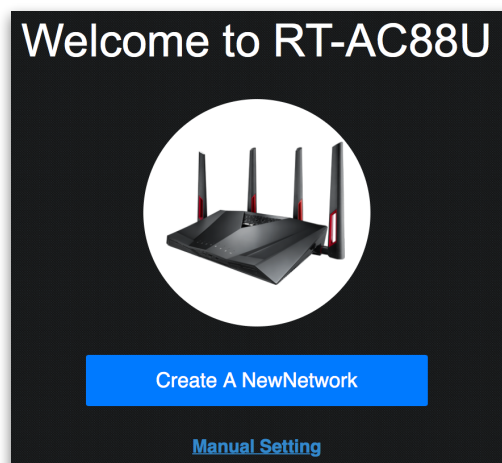

Where you will need to change the XXXX to the last 4 digits to Your Router's MAC address (this is located on the bottom of the router on a white attached sticker).

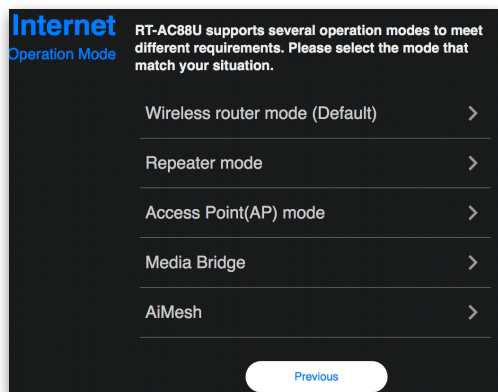

On the login page, key in the default user name (admin) and password (joshua).

Next click on the QIS - Smart Connect Wizard towards to the top left of the page.

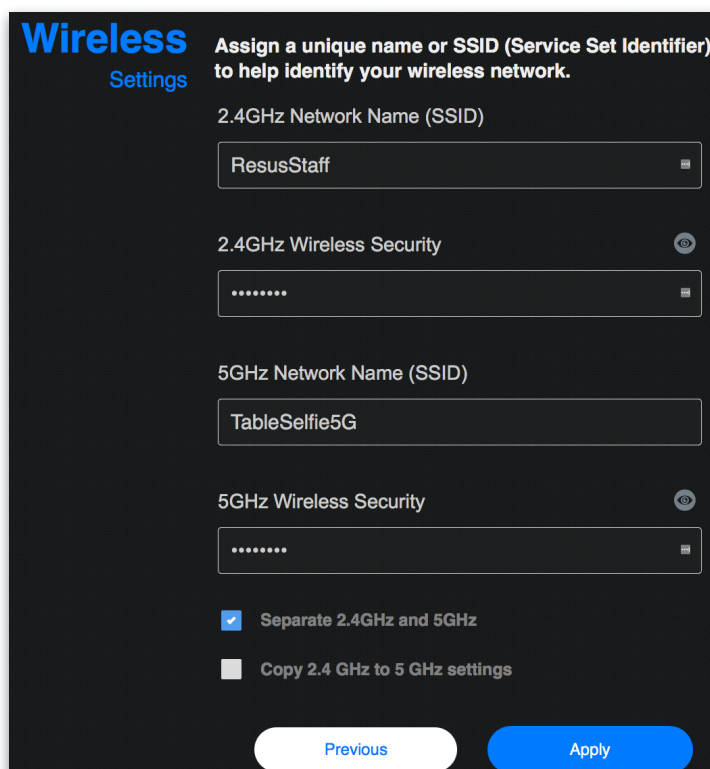

Then click on the Manual Settings Option on the Page that Appears. Following by 'Choose operation mode' then Select the 'Access Point (AP) mode', followed by 'Automatic IP'.

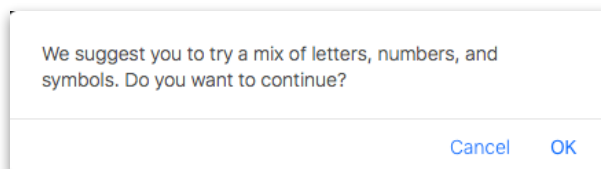

The final step is to enter the Network Names. Click the 'Separate 2.5GHz and 5GHz' tick box so it's selected then Enter the Network Name SSID for 2GHz as 'TableSelfie' and the 5GHz Network Name (SSID) as 'TableSelfie5G'.

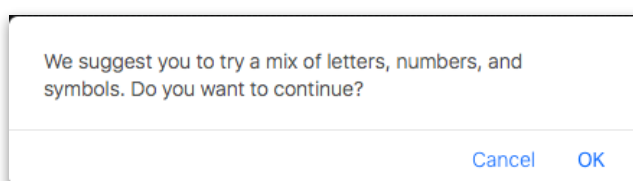

Each password enter as letmein123 (all lowercase). These will be changed shortly but are required to setup the initial networks.

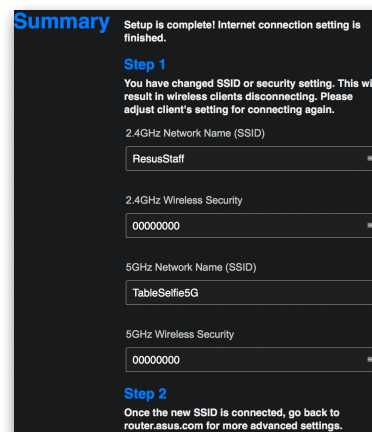

Click Apply then Click OK on the following Dialogue:

Then Click On the next dialogue box (same one, it's being thorough!):

Finally it will show a Summary page whilst it's saving and restarting the Router.

Summary Setup is complete! Internet connection setting is finished.

Step 1
You have changed SSID or security setting. This will result in wireless clients disconnecting. Please adjust client's setting for connecting again.

2.4GHz Network Name (SSID)
ResusStaff

2.4GHz Wireless Security
00000000

5GHz Network Name (SSID)
TableSelfie5G

5GHz Wireless Security
00000000

Step 2
Once the new SSID is connected, go back to router.asus.com for more advanced settings.

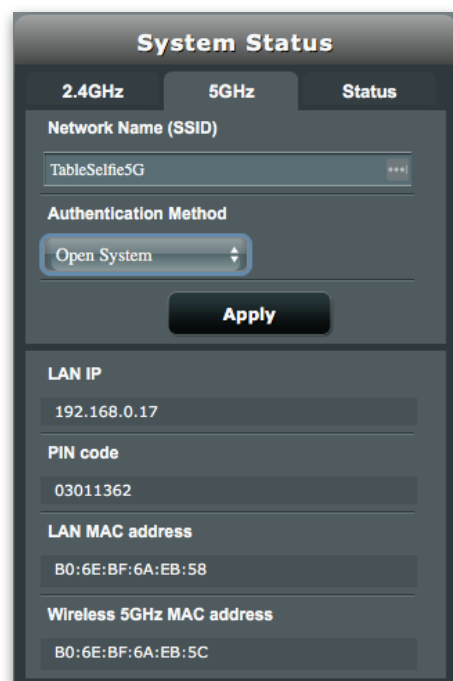

Finally give it 5 minutes to restart then re-connect to the TableSelfie5G Wifi and go to the Asus Router config page.

<http://rt-ac88u-XXXX.local>

Where you will need to change the XXXX to the last 4 digits to Your Router's MAC address (this is located on the bottom of the router on a white attached sticker).

Then on the right hand side you'll notice the System Status has 3 tabbed options, 2.5GHz, 5GHz and Status. Make sure the 5GHz option is selected and change the Authenticated Method to 'Open' and click 'Apply'.

Give it a couple of minutes to set those settings and restart then you can connect to the TableSelfie5G and they are ready for the Server and TableSelfie's to be used.

System Status

2.4GHz 5GHz Status

Network Name (SSID)

Router Setup - Internet

If you don't need uploads then setting up the Asus Router is relatively easy.

Firstly turn on the Router and the Server making sure the Router has an ethernet adaptor connected to one of it's ports and also the Server Ethernet Port.

Next connect to the Router Wifi with your desired device (Preferably TalbleSelfie5G).

Once connected type into a browser the following:

<http://rt-ac88u-XXXX.local>

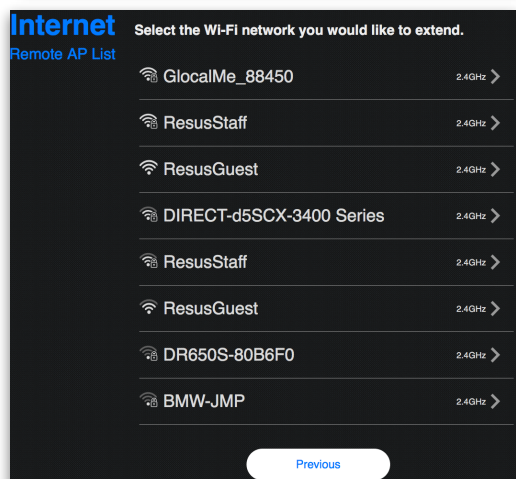

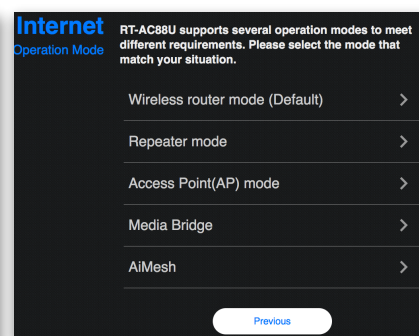

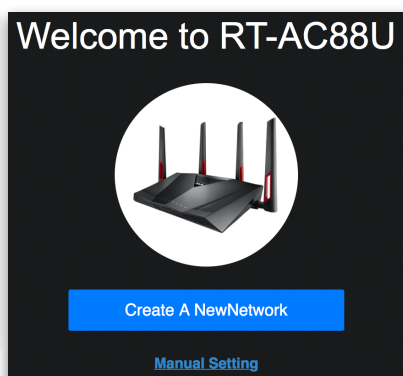

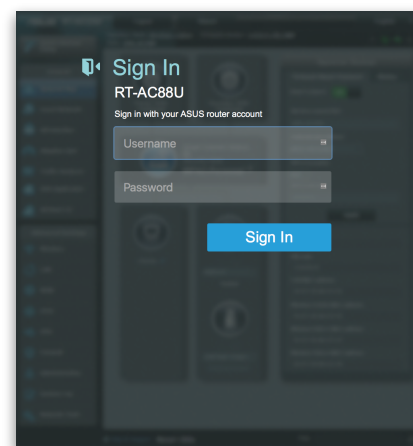

Where you will need to change the XXXX to the last 4 digits to Your Router's MAC address (this is located on the bottom of the router on a white attached sticker).

On the login page, key in the default user name (admin) and password (joshua).

The Router's login password can be changed from the default admin and joshua if required within the Asus Admin.

Next click on the QIS - Smart Connect Wizard towards to the top left of the page.

Then click on the Manual Settings Option on the Page that Appears. Following by 'Choose operation mode' then Select the 'Repeater mode', then Select the WiFi network you wish to repeat. Then enter that network's Wireless Security key, click 'Next' followed by 'Automatic IP'.

The final step is to enter the Network Names. Click the 'Separate 2.5GHz and 5GHz tick box so it's selected then Enter the Network Name SSID for 2GHz as 'TableSelfie' and the 5GHz Network Name (SSID) as 'TableSelfie5G'.

Each password enter as letmein123 (All Lowercase). These will be changed shortly but are required to setup the initial networks.

Note: The names of the Network are TableSelfie and TableSelfie5G with Capital T S and G.

Wireless Settings

Assign a unique name or SSID (Service Set Identifier) to help identify your wireless network.

☒ Separate 2.4GHz and 5GHz
☐ Copy 2.4 GHz to 5 GHz settings

Previous Apply

Click Apply then Click OK on the following Dialogue:

We suggest you to try a mix of letters, numbers, and symbols. Do you want to continue?

Cancel OK

Then Click On the next dialogue box (same one, it's being thorough!):

We suggest you to try a mix of letters, numbers, and symbols. Do you want to continue?

Cancel OK

Finally it will show a Summary page whilst it's saving and restarting the Router.

Summary

Setup is complete! Internet connection setting is finished.

Step 1
You have changed SSID or security setting. This will result in wireless clients disconnecting. Please adjust client's setting for connecting again.

2.4GHz Network Name (SSID)
ResusStaff

2.4GHz Wireless Security
00000000

5GHz Network Name (SSID)
TableSelfie5G

5GHz Wireless Security
00000000

Step 2
Once the new SSID is connected, go back to router.asus.com for more advanced settings.

Finally give it 5 minutes to restart then re-connect to the

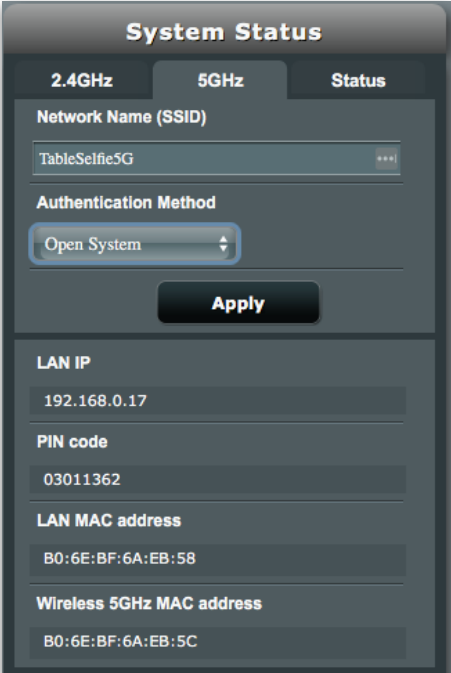

TableSelfie5G Wifi and go to the Asus Router config page.

<http://rt-ac88u-XXXX.local>

Where you will need to change the XXXX to the last 4 digits to Your Router's MAC address (this is located on the bottom of the router on a white attached sticker).

Then on the right hand side you'll notice the System Status has 3 tabbed options, 2.5GHz, 5GHz and Status. Make sure the 5GHz option is selected and change the Authenticated Method to 'Open' and click 'Apply'.

Give it a couple of minutes to set those settings and restart then you can connect to the TableSelfie5G and they are ready for the Server and TableSelfie's to be used.

The screenshot shows a web interface titled "System Status" with three tabs: "2.4GHz", "5GHz", and "Status". The "5GHz" tab is selected. The interface contains the following fields and controls:

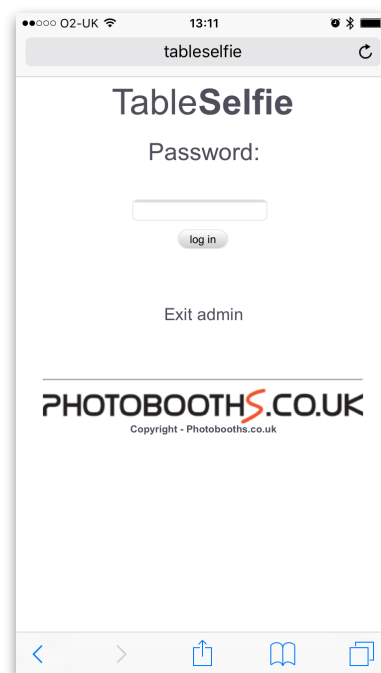

- Network Name (SSID):** A text input field containing "TableSelfie5G".
- Authentication Method:** A dropdown menu with "Open System" selected.
- Apply:** A black button with white text.
- LAN IP:** A text input field containing "192.168.0.17".
- PIN code:** A text input field containing "03011362".
- LAN MAC address:** A text input field containing "B0:6E:BF:6A:EB:58".
- Wireless 5GHz MAC address:** A text input field containing "B0:6E:BF:6A:EB:5C".

TableSelfie Setup

Before your event you will need to set the TableSelfie's up for use. After connecting to the WiFi and bringing up the TableSelfie Control click on the 'Set up tables' text.

Click on the Password text entry box and enter the password `letmein123` into the field and click the `log in` button.

If you have entered the Table Setup's by accident click the `Exit admin` text to return back to the TableSelfie Control.

Setting Up Ready For An Event

To prepare for your event we can setup various aspects of the TableSelfie to get it all correctly working for your client. After entering the admin you are shown 4 options, set up the Tables, where you can set the LED light colour, Set up photos, where you can change the final photo's look, LCD setup, where you can choose Cloud upload options and Manage Folders where you can delete events and copy events to a USB.

Admin Options - Set up tables

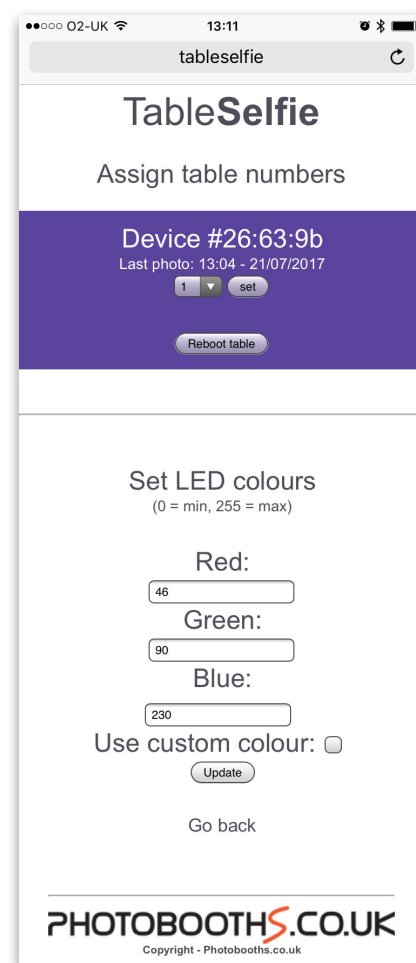

Each TableSelfie also has an option to Reboot table which will restart the particular TableSelfie (just that particular one).

Also an option to alter the colour of the LED's on the TableSelfie allows the colour of the LED's to be set to pulsing (different colours) by de-selecting the Use custom colour or a set colour by setting the Red Green or Blue to a specific RGB value 0 - 255 and ticking the Use custom colour box.

More information and a list of the different colours and decimal values can be found here:

https://en.wikipedia.org/wiki/Web_colors

Note: After changing the colour's it will require a server and a TableSelfie restart in order for the individual TableSelfie's' to pickup the new LED colour setup.

Admin Options - Set up photos

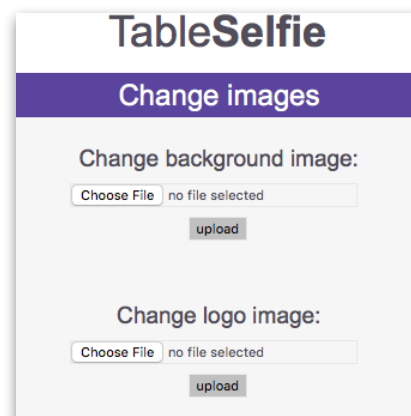

To set your Photo's events up this page gives you the options to alter the images, logos, text, backgrounds and image sizes.

Admin Options - Change Images

To upload a background or Logo click the Change Images option then select the Choose File to upload a new background or Logo, backgrounds are in jpg format, whilst logo's are best as PNG formats.

When using a Desktop (Windows) PC after connecting to the TableSelfie WiFi it's best to type in <http://192.168.1.202/> to access the TableSelfie to allow Background and Logo Uploads.

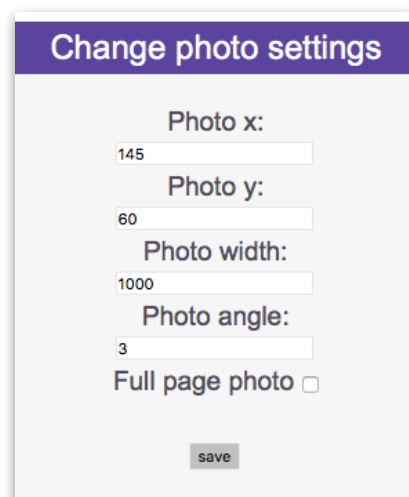

The screenshot shows the 'TableSelfie' header and a 'Change images' section. It contains two identical form blocks. The first block is for the 'Change background image:' with a 'Choose File' button, a text field showing 'no file selected', and an 'upload' button. The second block is for the 'Change logo image:' with the same 'Choose File', 'no file selected', and 'upload' elements.

Admin Options - Change Photo Settings

The layout can incorporate a background image letting you reduce the size of the taken photo to position on the layout. The Change Photo Settings allow you to move the position of the photo around and if required rotate the photo.

Alternatively click 'Full Page Photo' to have the taken photo the full size of the print.

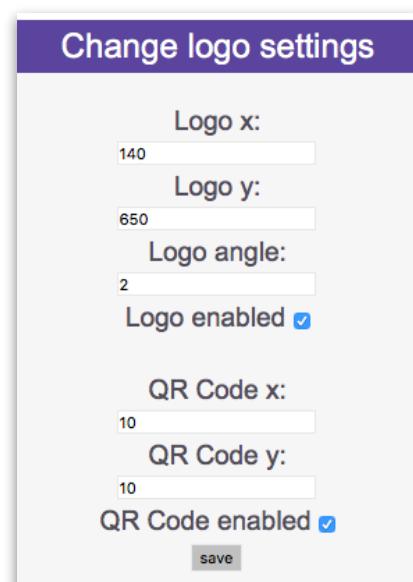

The screenshot shows the 'Change photo settings' form. It includes input fields for 'Photo x:' (145), 'Photo y:' (60), 'Photo width:' (1000), and 'Photo angle:' (3). There is a checkbox for 'Full page photo' which is currently unchecked. A 'save' button is at the bottom.

Admin Options - Change Logo Settings

The position of the Logo can be moved around on the layout to suit. De-select Logo enabled if you don't wish to have a logo viewing.

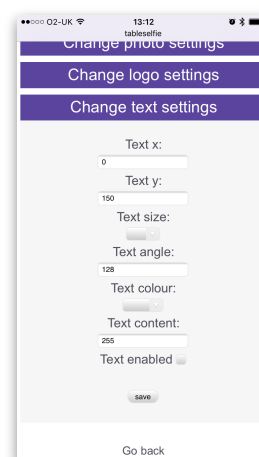

If your doing Cloud uploads the QR Code X, Y position and ticking Enable for it to be present on the Prints.
Note: It's only on the print the QR Code appears.

The screenshot shows the 'Change logo settings' form. It includes input fields for 'Logo x:' (140), 'Logo y:' (650), and 'Logo angle:' (2). There is a checked checkbox for 'Logo enabled'. Below these are input fields for 'QR Code x:' (10) and 'QR Code y:' (10), followed by a checked checkbox for 'QR Code enabled'. A 'save' button is at the bottom.

Admin Options - Change text settings

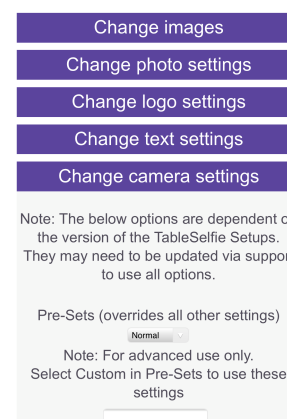

If you want a text overlay on the Layout use these settings to move it around, enter the text and Enable/Disable the text with Text Enabled check box.

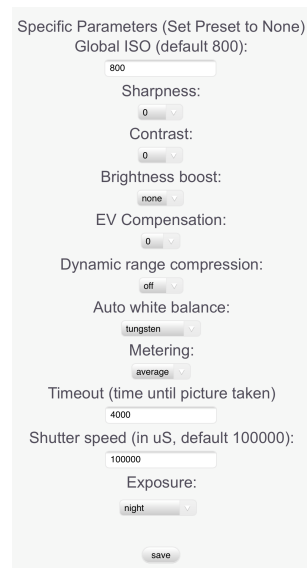

Admin Options - Change camera settings

Camera settings can be individually changed, the Pre-Sets options allows you to choose the different pre set or custom set to use below options.

TableSelfie

When setting to Custom you can alter the settings specifically to suit the lighting at an event if the Pre-Set's don't provide the desired results.

Admin Options - Change videos

Select the Video to Change then Click Choose File to select the video you wish to Upload. Click Upload to upload the specific video.

Admin Options - Event Options

A few Event options are available for use of the TableSelfies. You can limit how many prints are provided by your client. Set the Limit to Number of Prints (zero for infinite) then Click Reset Prints Left before you event starts.

Cloud URL is the Specific Event Cloud uploads, for each event you ideally would create a new link by clicking Create New Cloud Link.

Remote Access

The TableSelfie's and Server are designed to be a closed system (for security), however it is possible for us to remote connect (for support reasons, or specific updates) into the system. If this is required all that is needed is a desktop or a Laptop (a laptop is probably easier due to the free nature of moving a laptop around) that has both WiFi connection and Ethernet connection. To get this setup follow these steps:

- Turn the Asus Router and Server on and wait until fully booted.
- Connect an Ethernet cable from your Desktop/Laptop into the Asus router (one of the central ports at the back, not the Broadband port).
- On your Desktop/Laptop connect the Wifi to your home broadband Wifi.
- Install TeamViewer (from [teamviewer.com](https://www.teamviewer.com)) on the Desktop/Laptop and Run. When connected it should show a Your ID and Password that when passed to

support allows them to remote into the Desktop/Laptop and then gain access to the TableSelfie's and Router. Depending on the system you have on The Desktop/Laptop we may download a program called 'Putty' that allows us to remote into the systems, this is a small program and won't affect your systems (and can be removed afterwards if necessary).

- To access the individual TableSelfie's they will need to be turned on also so we can interact with them.

Video Sizes

Opening Video	opening_video.mp4	Width:480	Height:720
321 Video	3-2-1.mp4	Width:480	Height:720
After 321	after_321.mp4	Width:480	Height:720
Print Video	printcolour.mp4	Width:514	Height:298
Cancel Video	cancel.mp4	Width:514	Height:298
Printing Video	printing.mp4	Width:480	Height:577

We suggest using Adobe CC Animate for creating animated video's then converting to MP4 files using Adobe CC Media Encoder.

Image Sizes

Background Image - 1280pixels width x 854 pixels height

Logo Size - Anything smaller than the Background Image size, the smaller the better is advised.

SPECIAL TIPS

1. We suggest setting up your system and if requiring to upload utilising your own home broadband to get some practice in.
Then when this is fully working if you go to an event and find that uploads are not for whatever reason uploading there is a good chance it's the Wifi reception and setup at the venue. Whereupon you can ask if a dedicated (not public) access wifi is available.
2. Make sure you charge battery packs up through the night before an event.
3. Try to keep any logo's used to a minimum size to help with file sizes and transfers.

Trouble Shooting

I can't see the TableSelfie5G Wifi?

Check that the server is on, a light on the PC will signify that it is turned on. If only just turned on give it a couple of minutes to boot up fully then try searching for a WiFi. Turning off WiFi then turning it back on will refresh the list on your Device.

Photo's taken are not uploading to the Cloud.

It's worth checking that the Wifi you connected too with the Router is not a public access Wifi as these require a login to work correctly. Make sure a strong and non public Wifi is connected too.

I'm unable to log into the TableSelfie Setup Page?

Check the password you are entering is all in lowercase with no spaces.

I've tried taking a picture on a particular camera but it shows an error that the camera isn't available/ready?

Check that the TableSelfie is actually switched on, the best way to do this quickly is see if the LED's are showing. If they are showing try restarting that TableSelfie from the admin or turning the battery pack off then on on the physical TableSelfie.

A printing Error has appeared when trying to print.

Check the printers paper/ribbon hasn't run out, also check the Printer is turned on. It's also worth checking that the USB cable's are securely in place on the Printer and the PC.

If the printer is still not printing access into the Printers CUPS system (via 192.168.1.202:631 in a browser whilst connected to the TableSelfie Wifi) and go to the printers section. It will show any problems the printer may have and allows you to select the printer and in the secondary drop down menu's to resume the printer if the paper has been changed.

The printer is connected and showing in the CUPS System but it's not printing?

Check that the printer is Set As Server Default, without this set in the CUPS printing it will not print. See the 'TableSelfie Printer Setup' Section for setting up a printer on the Server.

I'm unable to upload a Background/Logo in the admin?

Firstly check that the format of the image is JPG or PNG. On some occasions certain mobile devices may not allow the uploads to post to the server. If this is the case try using a desktop PC connected to the TableSelfie Wifi to upload the images.

Also check that the images are not very larger file sizes.

When uploading from certain Mobile Devices the default files may appear to be

images but are in fact gif or movie files. For best results it's best to connect a Desktop PC to the TableSelfie WiFi and upload the images from there.

Note: When using a Desktop (Windows or Mac) PC after connecting to the TableSelfie WiFi type in <http://192.168.1.202/> to access the TableSelfie to allow Background and Logo Uploads.

I've had a power cut and I'm unable to print

In most cases powering up the Router and Server will after a short amount of time (5 minutes) will allow the TableSelfie's to automatically re-connect and print.

If this doesn't seem to happen on some of the TableSelfie's then turning off then on those particular ones should solve the problem. Although further time will also allow them to re-connect.

I've connected to the TableSelfie Wifi but it's not letting me see the Admin page on 192.168.1.202?

Check that the Server is turned on and a Ethernet cable is connected from the server to the Wifi Access Point.

Also check that you are connected to the TableSelfie5G Wifi and not some other WiFi connection.

The camera is taking the picture but not showing the correct image on the preview?

It will print the correct image but the preview may be of the previous image. If this is the case try reducing the size of the logo and check the size of the background image that is being used. If they are too large it can take too long to render the image and not be able to show the correct one on screen (however it will print the correct image).
